PROFESSIONAL SUMMARY
Backend Engineer with 2+ years of experience designing high-throughput distributed microservices, RESTful and gR
TECHNICAL SKILLS
- Languages: Python, Go, SQL, JavaScript/TypeScript
- Backend Frameworks: FastAPI, Flask, Django, Gin, Node.js/Express
- Databases & Storage: PostgreSQL, MySQL, Redis, MongoDB, SQLAlchemy, Alembic, DynamoDB
- Distributed Systems & Architecture: Microservices, Apache Kafka, RabbitMQ, REST APIs, gRPC, Docker, Kuberne
- Cloud & DevOps: AWS (EC2, S3, RDS, Lambda), GitHub Actions CI/CD, Prometheus, Grafana, OpenTelemetry
- Concepts: ACID transactions, B-Tree indexing, Cache-aside pattern, Distributed locking, Concurrency, Sharding
WORK EXPERIENCE
Backend Engineering Intern | ScaleGrid Cloud Solutions | Jan 2024 - Present
- Designed and maintained high-throughput REST APIs handling 4.5M daily requests with p99 latency under 45ms u
- Architected multi-tier caching with Redis using cache-aside pattern and single-flight query locking, reducing primary
- Engineered asynchronous notification delivery pipeline leveraging RabbitMQ and Celery with exponential backoff a
- Diagnosed database query bottlenecks via EXPLAIN ANALYZE, creating targeted compound indexes that cut slow
PROJECTS
1. Distributed Idempotent Payment Gateway (Python, FastAPI, Redis, PostgreSQL)
- Developed an ACID-compliant mock payment processing service enforcing idempotency keys with Redis distribute
- Implemented transactional outbox pattern to guarantee eventual consistency between SQL records and Kafka eve
2. Real-Time Collaborative Document Backend (Go, WebSockets, PostgreSQL)
- Built high-concurrency WebSocket gateway handling 15,000 concurrent socket connections using Go goroutines a
- Managed conflict-free replicated data types (CRDTs) to ensure convergence across simultaneous editing sessions
EDUCATION
B.Tech in Computer Science and Engineering | National Institute of Technology | Graduated 2024 | GPA: 8.7 / 10.0
